Gulfcheck Oil Analysis Program

The Gulfcheck Oil Analysis Programs are designed to provide an invaluable maintenance tool regardless of your application. Predictive Maintenance through oil analysis shows a 250% return on investment compared to Reactive or Run-To-Fail maintenance programs. Test kits available through your Gulfcheck Distributor can reduce unexpected failures, reduce down time, extend oil drains and lower repair costs. Samples taken at regular intervals are analyzed to determine the condition of the equipment and condition of the lubricant. Trending test data over time provides an invaluable tool for spotting increasing wear rates and monitoring contamination levels.
